

WHAT IS THE MIAMI BEACH COMPOSTING BIN PROGRAM?

It is a program run by Surfrider Miami where Miami Beach residents living in single-family homes can register via this [link](#) or via the QR code to obtain a free compost bin.

WHY NOW?

Landfills produce Greenhouse Gas Emissions such as methane, nitrous oxide and carbon dioxide from the anaerobic decomposition of organic waste.

Composting is a sustainable practice that stabilizes organic waste for reuse and binds carbon to soil, rather than releasing it into the atmosphere.

The objective of the Backyard Bin Compost program is to help residents divert between 20 to 80 pounds of waste per month per each household.

WHO BENEFITS?

RESIDENTS: Backyard Bin Composting is a great way to dispose of your yard and food waste to convert it into a nutrient rich fertilizer for your garden. It helps you save on monthly disposal fees and fertilizer costs.

LOCAL COMMUNITY: It diverts organic waste from landfills in a community where there is no access to industrial composting as well as keeping harmful synthetic fertilizers out of the bay!

GLOBAL COMMUNITY: Reduces emissions from landfills and improves water quality.

WHAT WOULD THIS LOOK LIKE?

RESIDENTS REQUEST A FREE COMPOST BIN

Miami Beach residents living in single-family homes can obtain a FREE compost bin after taking a 10-min educational workshop on composting. Sign up [here](#) and register for the workshop [here](#).

SURFRIDER FOUNDATION SCHEDULES A DELIVERY

The bins will be available for home delivery or pick-up.

UF IFAS OFFERS ONLINE WORKSHOPS

Attend a "Compost Happens" Workshop and learn how to turn yard and kitchen waste into fertile, organic matter.

MIAMI BEACH

This Project is funded in part
by a grant from the City of Miami Beach
